Portfolio Summary

Investment Objective

The Portfolio seeks to provide a high level of current income.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follow do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Expenses	0.25%
12b-1 Distribution Fee	None
Other Expenses	0.04%
Total Annual Operating Expenses	0.29%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% a year and that total annual portfolio operating expenses remain as stated in the preceding table. The results apply whether or not you redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$30	\$93	\$163	\$368

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 37%.

Primary Investment Strategies

The Portfolio invests mainly in a diversified group of high-yielding, higher-risk corporate bonds—commonly known as “junk bonds”—with medium- and lower-range credit-quality ratings. The Portfolio invests at least 80% of its assets in corporate bonds that are rated below Baa by Moody’s Investors Service, Inc. (Moody’s); have an equivalent rating by any other independent bond-rating agency; or, if unrated, are determined to be of comparable quality by the Portfolio’s advisor. The Portfolio’s 80% policy may be changed only upon 60 days’ notice to shareholders.

The Portfolio may not invest more than 20% of its assets in any of the following, taken as a whole: bonds with credit ratings lower than B or the equivalent, convertible securities, preferred stocks, and fixed and floating rate loans of medium- to lower-range credit quality. The loans in which the Portfolio may invest will be rated Baa or below by Moody’s; have an equivalent rating by any other independent bond-rating agency; or, if unrated, are determined to be of comparable quality by the Portfolio’s advisor. The Portfolio’s high-yield bonds and loans have mostly short- and intermediate-term maturities.

Primary Risks

An investment in the Portfolio could lose money over short or even long periods. You should expect the Portfolio’s share price and total return to fluctuate within a wide range, like the fluctuations of the overall bond market, but with potentially greater volatility. The Portfolio’s performance could be hurt by:

- *Credit risk*, which is the chance that a bond or loan issuer will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer’s ability to make such payments will cause the price of that bond to decline. Credit risk should be high for the Portfolio because it invests mainly in bonds and loans with medium- and lower-range credit-quality ratings.
- *Interest rate risk*, which is the chance that bond and loan prices overall will decline because of rising interest rates. Interest rate risk should be moderate for the Portfolio because it invests primarily in short- and intermediate-term bonds, whose prices are less sensitive to interest rate changes than are the prices of long-term bonds.
- *Income risk*, which is the chance that the Portfolio’s income will decline because of falling interest rates. A Portfolio’s income declines when interest rates fall because the Portfolio then must invest in lower-yielding bonds. Income risk is generally moderate for intermediate-term bond funds, so investors should expect the Portfolio’s monthly income to fluctuate accordingly.
- *Liquidity risk*, which is the chance that the Portfolio could experience difficulties in valuing and selling illiquid high-yield bonds or loans. In the event that the Portfolio needs to sell a portfolio security during periods of infrequent trading of the security, it may not receive full value for the security.

- *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective.

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index, which has investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses, but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at advisors.vanguard.com or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — High Yield Bond Portfolio

During the periods shown in the bar chart, the highest return for a calendar quarter was 14.41% (quarter ended June 30, 2009), and the lowest return for a quarter was -14.60% (quarter ended December 31, 2008).

Average Annual Total Returns for Periods Ended December 31, 2011

	1 Year	5 Years	10 Years
High Yield Bond Portfolio	6.93%	5.78%	6.62%
Barclays Capital U.S. Corporate High-Yield Bond Index (reflects no deduction for fees or expenses)	4.98%	7.54%	8.85%

Investment Advisor

Wellington Management Company, LLP

Portfolio Manager

Michael L. Hong, CFA, Vice President and Fixed Income Portfolio Manager of Wellington Management. He has managed the Portfolio since 2008.

Tax Information

The tax consequences of your investment in the Portfolio depend on the provisions of the annuity or life insurance program through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance program through which Portfolio shares are offered.

Payments to Financial Intermediaries

The Portfolio and its investment advisor do not pay financial intermediaries for sales of Portfolio shares.

More on the Portfolio

This prospectus describes the primary risks you would face as an investor in this Portfolio. It is important to keep in mind one of the main axioms of investing: The higher the risk of losing money, the higher the potential reward. The reverse, also, is generally true: The lower the risk, the lower the potential reward. As you consider an investment in any mutual fund, you should take into account your personal tolerance for fluctuations in the securities markets. Look for this  symbol throughout the prospectus. It is used to mark detailed information about the more significant risks that you would confront as a Portfolio investor. To highlight terms and concepts important to mutual fund investors, we have provided Plain Talk[®] explanations along the way. Reading the prospectus will help you decide whether the Portfolio is the right investment for you. We suggest that you keep this prospectus for future reference.

A Note About Vanguard Variable Insurance Fund

The High Yield Bond Portfolio of Vanguard Variable Insurance Fund is a mutual fund used solely as an investment option for annuity or life insurance contracts offered by insurance companies. This means that you cannot purchase shares of the Portfolio directly, but only through a contract offered by an insurance company.

The High Yield Bond Portfolio is separate from other Vanguard mutual funds, even when the Portfolio and a fund have the same investment objective and advisor. The Portfolio's investment performance will differ from the performance of other Vanguard funds because of differences in the securities held and because of administrative and insurance costs associated with the annuity or life insurance program through which you invest.

Plain Talk About Costs of Investing

Costs are an important consideration in choosing a mutual fund. That's because you, as a contract owner, pay a proportionate share of the costs of operating a portfolio, plus any transaction costs incurred when the portfolio buys or sells securities. These costs can erode a substantial portion of the gross income or the capital appreciation a portfolio achieves. Even seemingly small differences in expenses can, over time, have a dramatic effect on a portfolio's performance.

The following sections explain the primary investment strategies and policies that the Portfolio uses in pursuit of its objective. The Fund's board of trustees, which oversees the Portfolio's management, may change investment policies or strategies in the interests of shareholders without a shareholder vote, unless those policies are designated as fundamental.

Market Exposure

The Portfolio invests at least 80% of its assets in corporate bonds that are rated below Baa by Moody's Investors Service, Inc.; have an equivalent rating by any other independent bond rating agency; or, if unrated, are determined to be of comparable quality by the Portfolio's advisor. These bonds are mainly in a diversified group of high-yielding, higher-risk corporate bonds, commonly known as "junk bonds," which are mostly short- and intermediate-term. The Portfolio's 80% policy may be changed only upon 60 days' notice to shareholders. The Portfolio also invests in fixed and floating rate loans. As a result of this strategy, the Portfolio is subject to certain risks.

Plain Talk About High-Yield Bonds

High-yield bonds, or "junk bonds," are issued by companies or other entities whose ability to pay interest and principal on the debt in a timely manner is considered questionable. Such bonds are rated "below investment-grade" by independent rating agencies. Because they are riskier than investment-grade bonds, high-yield bonds typically must pay more interest to attract investors. Some high-yield bonds are issued by smaller, less-seasoned companies, while others are issued as part of a corporate restructuring, such as an acquisition, merger, or leveraged buyout. Some high-yield bonds were once rated as investment-grade but have been downgraded to junk-bond status because of financial difficulties experienced by their issuers. Conversely, an issuer's improving financial condition may result in an upgrading of its junk bonds to investment-grade status.

 *Because of its investment in junk bonds and loans, the Portfolio is subject to high credit risk, which is the chance that a bond or loan issuer will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer's ability to make such payments will cause the price of that bond to decline.*

 *The Portfolio is subject to interest rate risk, which is the chance that bond prices overall will decline because of rising interest rates. Interest rate risk should be moderate for the Portfolio because it invests mainly in short- and intermediate-term bonds, whose prices are less sensitive to interest rate changes than are the prices of long-term bonds.*

In general, interest rate fluctuations widen as a bond portfolio's average maturity lengthens. The Portfolio is expected to have a moderate level of interest rate risk because its holdings have short- and intermediate-term average maturities.

Although bonds are often thought to be less risky than stocks, there have been periods when bond prices have fallen significantly because of rising interest rates. For

instance, prices of long-term bonds fell by almost 48% between December 1976 and September 1981.

To illustrate the relationship between bond prices and interest rates, the following table shows the effect of a 1% and a 2% change (both up and down) in interest rates on the values of three noncallable bonds of different maturities, each with a face value of \$1,000.

How Interest Rate Changes Affect the Value of a \$1,000 Bond¹

Type of Bond (Maturity)	After a 1% <i>Increase</i>	After a 1% <i>Decrease</i>	After a 2% <i>Increase</i>	After a 2% <i>Decrease</i>
Short-Term (2.5 years)	\$977	\$1,024	\$954	\$1,049
Intermediate-Term (10 years)	922	1,086	851	1,180
Long-Term (20 years)	874	1,150	769	1,328

¹ Assuming a 4% coupon.

These figures are for illustration only; you should not regard them as an indication of future performance of the bond market as a whole or the Portfolio in particular.

Plain Talk About Bonds and Interest Rates

As a rule, when interest rates rise, bond prices fall. The opposite is also true: Bond prices go up when interest rates fall. Why do bond prices and interest rates move in opposite directions? Let's assume that you hold a bond offering a 4% yield. A year later, interest rates are on the rise and bonds of comparable quality and maturity are offered with a 5% yield. With higher-yielding bonds available, you would have trouble selling your 4% bond for the price you paid—you would probably have to lower your asking price. On the other hand, if interest rates were falling and 3% bonds were being offered, you should be able to sell your 4% bond for more than you paid.

 *The Portfolio is subject to income risk, which is the chance that the Portfolio's income will decline because of falling interest rates. The Portfolio's income declines when interest rates fall because the Portfolio then must invest in lower-yielding bonds.*

In general, income risk is higher for short-term bond portfolios and lower for long-term bond portfolios. Accordingly, the Portfolio should have a moderate level of income risk.

The Portfolio is subject to prepayment risk on fixed- and floating-rate loans, which is the chance that during periods of falling interest rates, issuers of loans may prepay the loan principal before its maturity date. The Portfolio would then lose potential price appreciation and would be forced to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the Portfolio's income.

Security Selection

The Portfolio may invest up to 10% of its assets in trust-preferred securities, which are preferred securities issued by a special purpose trust that holds subordinated debt of the trust's corporate parent. The interest received by the trust from the debt issued by the corporate parent is distributed to the holders of the trust-preferred securities. A trust-preferred security has characteristics of both a debt and an equity security and generally will have the same risks as those of debt and equity securities, including market, credit, interest rate, and call risks. Trust-preferred securities typically are subordinated to the bonds and other obligations of the parent company and, therefore, may be subject to greater credit risk than such bonds and obligations.

The Portfolio may invest up to 20% of its assets in government securities and/or bonds that are rated Baa or above by Moody's or have an equivalent rating from any other independent bond-rating agency. These are commonly referred to as investment-grade securities.

The Portfolio will only invest in bonds and loans that, at the time of initial investment, are rated Caa or higher by Moody's or have an equivalent rating from any other independent bond-rating agency. However, the Portfolio may continue to hold bonds that have been downgraded, even if they would no longer be eligible for purchase by the Portfolio.

Plain Talk About Credit Quality

A bond's credit-quality rating is an assessment of the issuer's ability to pay interest on the bond and, ultimately, to repay the principal. Credit quality is evaluated by one of the independent bond-rating agencies (for example, Moody's or Standard & Poor's), or through independent analysis conducted by a fund's advisor. The lower the rating, the greater the chance—in the rating agency's or advisor's opinion—that the bond issuer will default, or fail to meet its payment obligations. All things being equal, the lower a bond's credit rating, the higher its yield should be to compensate investors for assuming additional risk. Investment-grade bonds are those rated in one of the four highest ratings categories. A portfolio may treat an unrated bond as investment-grade if warranted by the advisor's analysis.

Credit risk is expected to be high for the Portfolio because it invests mainly in bonds with medium- and lower-range credit-quality ratings.

The Portfolio's advisor selects bonds on a company-by-company basis, emphasizing fundamental research and a long-term investment horizon. The analysis focuses on the nature of a company's business, its strategy, and the quality of its management. Based on this analysis, the advisor looks for companies whose prospects are stable or improving and whose bonds offer an attractive yield. Companies with improving prospects are normally more attractive because they offer better assurance of debt repayment and greater potential for capital appreciation.

 *The Portfolio is subject to manager risk, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective.*

As of December 31, 2011, the Portfolio's holdings had the following credit-quality characteristics:

<u>Credit Quality</u>	<u>Percentage of Portfolio's Net Assets</u>
Aaa/AAA	0.0%
Baa/BBB	6.0
Ba/BB	50.9
B	40.0
Below B/Other	3.1

Bonds rated less than Baa by Moody's or the equivalent by another firm, such as those held by the Portfolio, are classified as non-investment grade. These bonds carry a high degree of risk and are considered speculative by the major rating agencies. Because of the speculative nature of junk bonds, you should carefully consider the risks associated with the Portfolio before you purchase shares.

To minimize credit risk, the Portfolio normally diversifies its holdings among bonds of at least 150 separate issuers, representing many industries. As of December 31, 2011, the Portfolio held the bonds of 340 corporate issuers. This diversification should lessen the negative impact to the Portfolio of a particular bond issuer's failure to pay either principal or interest.

 *The Portfolio is subject to liquidity risk, which is the chance that the Portfolio could experience difficulties in valuing and selling illiquid high-yield bonds or loans. In the event that the Portfolio needs to sell a portfolio security during periods of infrequent trading of the security, it may not receive full value for the security.*

The Portfolio may also enter into mortgage-dollar-roll transactions, in which the Portfolio sells mortgage-backed securities to a dealer and simultaneously agrees to purchase similar securities in the future at a predetermined price. These transactions simulate an investment in mortgage-backed securities and have the potential to enhance the Portfolio's returns and reduce its administrative burdens, compared with holding mortgage-backed securities directly. These transactions may increase the Portfolio's turnover rate. Mortgage dollar rolls will be used only to the extent that they are consistent with the Portfolio's investment objective and risk profile.

Although it has no present plans to do so, the Portfolio may invest up to 5% of its assets in non-cash-flow-producing high-yield bonds, such as zero-coupon bonds (which pay interest only at maturity) or payment-in-kind bonds (which pay interest in the form of additional securities).

Other Investment Policies and Risks

The Portfolio may invest in bonds issued by foreign governments and companies, so long as the securities are denominated in U.S. dollars. To the extent that the Portfolio owns foreign bonds, it is subject to *country risk*, which is the chance that world events—such as political upheaval, financial troubles, or natural disasters—will adversely affect the value of securities issued by companies in foreign countries. Because the bond's value is designated in dollars rather than in the currency of the issuer's country, the Portfolio is not exposed to currency risk; rather, the issuer assumes the risk, usually to attract U.S. investors.

 ***The Portfolio may invest in derivatives. In general, derivatives may involve risks different from, and possibly greater than, those of the Portfolio's other investments.***

Generally speaking, a derivative is a financial contract whose value is based on the value of a financial asset (such as a stock, bond, or currency), a physical asset (such as gold, oil, or wheat), or a market index (such as the Barclays Capital U.S. Aggregate Bond Index). Investments in derivatives may subject the Portfolio to risks different from, and possibly greater than, those of the underlying securities, assets, or market indexes.

The Portfolio may invest in fixed income futures contracts, fixed income options, interest rate swaps, total return swaps, credit default swaps, or other derivatives only if the expected risks and rewards of the derivatives are consistent with the investment objective, policies, strategies, and risks of the Portfolio as disclosed in this prospectus. The advisor will not use derivatives to change the risk exposure of the Portfolio. In particular, derivatives will be used for the Portfolio only where they may help the advisor: invest in eligible asset classes with greater efficiency and lower cost than is possible through direct investment; add value when these instruments are attractively priced; or adjust sensitivity to changes in interest rates. The Portfolio will

not use derivatives for speculation or for the purpose of leveraging (magnifying) investment returns.

Plain Talk About Derivatives

Derivatives can take many forms. Some forms of derivatives, such as exchange-traded futures and options on securities, commodities, or indexes, have been trading on regulated exchanges for decades. These types of derivatives are standardized contracts that can easily be bought and sold, and whose market values are determined and published daily. Nonstandardized derivatives (such as swap agreements), on the other hand, tend to be more specialized or complex, and may be harder to value.

Cash Management

The Portfolio's daily cash balance may be invested in one or more Vanguard CMT Funds, which are very low-cost money market funds. When investing in a Vanguard CMT Fund, each Portfolio bears its proportionate share of the at-cost expenses of the CMT Fund in which it invests.

Temporary Investment Measures

The Portfolio may temporarily depart from its normal investment policies and strategies when the advisor believes that doing so is in the Portfolio's best interest, so long as the alternative is consistent with the Portfolio's investment objective. For instance, the Portfolio may invest beyond its normal limits in derivatives or exchange-traded funds that are consistent with the Portfolio's objective when those instruments are more favorably priced or provide needed liquidity, as might be the case if the Portfolio is transitioning assets from one advisor to another or receives large cash flows that it cannot prudently invest immediately.

In addition, the Portfolio may take temporary defensive positions that are inconsistent with its normal investment policies and strategies—for instance, by allocating substantial assets to cash, commercial paper, or other less volatile instruments—in response to adverse or unusual market, economic, political, or other conditions. In doing so, the Portfolio may succeed in avoiding losses but may otherwise fail to achieve its investment objective.

Frequent Trading or Market Timing

Background. Some investors try to profit from strategies involving frequent trading of mutual fund shares, such as market-timing. For funds holding foreign securities, investors may try to take advantage of an anticipated difference between the price of the fund's shares and price movements in overseas markets, a practice also known as

time-zone arbitrage. Investors also may try to engage in frequent trading of funds holding investments such as small-cap stocks and high-yield bonds. As money is shifted into and out of a fund by an investor engaging in frequent trading, the fund incurs costs for buying and selling securities, resulting in increased brokerage and administrative costs. These costs are borne by *all* fund investors, including the long-term investors who do not generate the costs. In addition, frequent trading may interfere with an advisor's ability to efficiently manage the fund.

Policies to Address Frequent Trading. The Vanguard funds (other than money market funds and short-term bond funds) do not knowingly accommodate frequent trading. The board of trustees of each Vanguard fund has adopted policies and procedures reasonably designed to detect and discourage frequent trading and, in some cases, to compensate the fund for the costs associated with it. These policies and procedures do not apply to Vanguard ETF® Shares because frequent trading in ETF Shares does not disrupt portfolio management or otherwise harm fund investors. Although there is no assurance that Vanguard will be able to detect or prevent frequent trading or market-timing in all circumstances, the following policies have been adopted to address these issues:

- Each Vanguard fund reserves the right to reject any purchase request—including exchanges from other Vanguard funds—without notice and regardless of size. For example, a purchase request could be rejected because of a history of frequent trading by the investor or if Vanguard determines that such purchase may negatively affect a fund's operation or performance.
- Certain Vanguard funds charge shareholders purchase and/or redemption fees on transactions.

You may purchase or sell Portfolio shares through a contract offered by an insurance company. When insurance companies establish omnibus accounts in the Portfolio for their clients, we cannot monitor the individual clients' trading activity. However, we review trading activity at the omnibus account level, and we look for activity that may indicate potential frequent trading or market-timing. If we detect suspicious trading activity, we will seek the assistance of the insurance company to investigate that trading activity and take appropriate action, including prohibiting additional purchases of Portfolio shares by a client. Insurance companies may apply frequent-trading policies that differ from one another. Please read the insurance company contract and program materials carefully to learn of any rules or fees that may apply.

See the accompanying prospectus for the annuity or insurance program through which Portfolio shares are offered for further details on transaction policies.

The Portfolio, in determining its net asset value, will, when appropriate, use fair-value pricing as described in the **Share Price** section. Fair-value pricing may reduce or eliminate the profitability of certain frequent-trading strategies.

Do not invest with Vanguard if you are a market-timer.

Turnover Rate

A mutual fund's turnover rate is a measure of its trading activity. The Portfolio may sell securities regardless of how long they have been held. The historical turnover rates for the Portfolio can be found in the **Financial Highlights** section of this prospectus. A turnover rate of 100% would occur, for example, if the Portfolio sold and replaced securities valued at 100% of its net assets within a one-year period.

Plain Talk About Turnover Rate

Before investing in a mutual fund, you should review its turnover rate. This gives an indication of how transaction costs, which are not included in a fund's expense ratio, could affect the fund's future returns. In general, the greater the volume of buying and selling by the fund, the greater the impact that dealer markups and other transaction costs will have on its return. Also, funds with high turnover rates may be more likely to generate capital gains that must be distributed to shareholders.

The Portfolio and Vanguard

Vanguard Variable Insurance Fund is a member of The Vanguard Group, a family of more than 170 mutual funds holding assets of approximately \$1.6 trillion. All of the funds that are members of The Vanguard Group (other than funds of funds) share in the expenses associated with administrative services and business operations, such as personnel, office space, and equipment.

Vanguard Marketing Corporation provides marketing services to the funds. Although shareholders do not pay sales commissions or 12b-1 distribution fees, each fund (other than a fund of funds) or each share class of a fund (in the case of a fund with multiple share classes) pays its allocated share of the Vanguard funds' marketing costs.

Plain Talk About Vanguard's Unique Corporate Structure

The Vanguard Group is truly a *mutual* mutual fund company. It is owned jointly by the funds it oversees and thus indirectly by the shareholders in those funds. Most other mutual funds are operated by management companies that may be owned by one person, by a private group of individuals, or by public investors who own the management company's stock. The management fees charged by these companies include a profit component over and above the companies' cost of providing services. By contrast, Vanguard provides services to its member funds on an at-cost basis, with no profit component, which helps to keep the funds' expenses low.

Investment Advisor

Wellington Management Company, LLP (Wellington Management), 280 Congress Street, Boston, MA 02210, provides advisory services for the Portfolio. Wellington Management, a Massachusetts limited liability partnership, is a professional investment counseling firm that provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 70 years. As of December 31, 2011, Wellington Management had investment management authority with respect to approximately \$651 billion in assets. The firm-wide asset totals do not include agency mortgage-backed security pass-through accounts managed for the Federal Reserve. The firm manages the Portfolio subject to the supervision and oversight of Vanguard and the Fund's board of trustees.

Wellington Management's advisory fee is paid quarterly and is a percentage of average daily net assets under management during the most recent fiscal quarter.

For the fiscal year ended December 31, 2011, the advisory fee paid to Wellington Management represented an effective annual rate of 0.06% of the Portfolio's average net assets.

Under the terms of an SEC exemptive order, the Fund's board of trustees may, without prior approval from shareholders, change the terms of an advisory agreement or hire a new investment advisor—either as a replacement for an existing advisor or as an additional advisor. Any significant change in the Portfolio's advisory arrangements will be communicated to shareholders in writing. In addition, as the Portfolio's sponsor and overall manager, The Vanguard Group may provide investment advisory services to the Portfolio, on an at-cost basis, at any time. Vanguard may also recommend to the board of trustees that an advisor be hired, terminated, or replaced, or that the terms of an existing investment advisory agreement be revised.

For a discussion of why the board of trustees approved the Portfolio's investment advisory agreement, see the Vanguard Variable Insurance Fund's most recent semiannual report to shareholders covering the fiscal period ended June 30.

The manager primarily responsible for the day-to-day management of the Portfolio is:

Michael L. Hong, CFA, Vice President and Fixed Income Portfolio Manager of Wellington Management. He has managed fixed income portfolios for Wellington Management since 1997 and has managed the High Yield Bond Portfolio since 2008. Education: A.B., Harvard College.

The Fund's *Statement of Additional Information* provides information about the portfolio manager's compensation, other accounts under management, and ownership of shares of the Portfolio.

Taxes

The tax consequences of your investment in the Portfolio depend on the provisions of the annuity or life insurance program through which you invest. For more information on taxes, please refer to the accompanying prospectus of the annuity or life insurance program through which Portfolio shares are offered.

Share Price

Share price, also known as *net asset value* (NAV), is calculated each business day as of the close of regular trading on the New York Stock Exchange, generally 4 p.m., Eastern time. The NAV per share is computed by dividing the total assets, minus liabilities, of the Portfolio by the number of Portfolio shares outstanding. On holidays or other days when the Exchange is closed, the NAV is not calculated, and the Portfolio does not transact purchase or redemption requests. However, on those days the value of the Portfolio's assets may be affected to the extent that the Portfolio holds foreign securities that trade on foreign markets that are open.

Debt securities held by a Vanguard portfolio are valued based on information furnished by an independent pricing service or market quotations. Certain short-term debt instruments used to manage a portfolio's cash are valued on the basis of amortized cost. The values of any foreign securities held by a portfolio are converted into U.S. dollars using an exchange rate obtained from an independent third party. The values of any mutual fund shares held by a portfolio are based on the NAVs of the shares. The values of any ETF or closed-end fund shares held by a portfolio are based on the market value of the shares.

When a portfolio determines that pricing-service information or market quotations either are not readily available or do not accurately reflect the value of a security, the

security is priced at its *fair value* (the amount that the owner might reasonably expect to receive upon the current sale of the security). A portfolio also may use fair-value pricing on bond market holidays when the portfolio is open for business (such as Columbus Day and Veterans Day).

Fair-value prices are determined by Vanguard according to procedures adopted by the board of trustees. When fair-value pricing is employed, the prices of securities used by a portfolio to calculate its NAV may differ from quoted or published prices for the same securities.

The Portfolio's NAV is used to determine the unit value for the annuity or life insurance program through which you invest. For more information on unit values, please refer the accompanying prospectus of the insurance company that offers your annuity or life insurance program.

Financial Highlights

The following financial highlights table is intended to help you understand the Portfolio's financial performance for the periods shown, and certain information reflects financial results for a single Portfolio share. The total returns in the table represent the rate that an investor would have earned or lost each period on an investment in the Portfolio (assuming reinvestment of all distributions). This information has been obtained from the financial statements audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, whose report—along with the Portfolio's financial statements—is included in Vanguard Variable Insurance Fund's most recent annual report to shareholders. You may obtain a free copy of the latest annual or semiannual report online at vanguard.com or by contacting Vanguard by telephone or mail.

Yields and total returns presented for the Portfolio are net of the Portfolio's operating expenses, but do not take into account charges and expenses attributable to the annuity or life insurance program through which you invest. The expenses of the annuity or life insurance program reduce the returns and yields you ultimately receive, so you should bear those expenses in mind when evaluating the performance of the Portfolio and when comparing the yields and returns of the Portfolio with those of other mutual funds.

Plain Talk About How to Read the Financial Highlights Table

The Portfolio began fiscal year 2011 with a net asset value (price) of \$7.78 per share. During the year, the Portfolio earned \$0.516 per share from investment income (interest and dividends) and \$0.004 per share from investments that had appreciated in value or that were sold for higher prices than the Portfolio paid for them.

Shareholders received \$0.58 per share in the form of dividend distributions. A portion of each year's distributions may come from the prior year's income or capital gains.

The share price at the end of the year was \$7.72, reflecting earnings of \$0.52 per share and distributions of \$0.58 per share. This was a decrease of \$0.06 per share (from \$7.78 at the beginning of the year to \$7.72 at the end of the year). For a shareholder who reinvested the distributions in the purchase of more shares, the total return was 6.93% for the year.

As of December 31, 2011, the Portfolio had approximately \$397 million in net assets. For the year, its expense ratio was 0.29% (\$2.90 per \$1,000 of net assets), and its net investment income amounted to 6.85% of its average net assets. The Portfolio sold and replaced securities valued at 37% of its net assets.

General Information

This Portfolio of Vanguard Variable Insurance Fund offers its shares to insurance companies that fund both annuity and life insurance contracts. Because of differences in tax treatment or other considerations, the best interests of various contract owners participating in the Portfolio might at some time be in conflict. The Fund's board of trustees will monitor for any material conflicts and determine what action, if any, should be taken.

If the board of trustees determines that continued offering of shares would be detrimental to the best interests of the Portfolio's shareholders, the Portfolio may suspend the offering of shares for a period of time. If the board of trustees determines that a specific purchase acceptance would be detrimental to the best interests of the Portfolio's shareholders (for example, because of the size of the purchase request or a history of frequent trading by the investor), the Portfolio may reject such a purchase request.

If you wish to redeem money from the Portfolio, please refer to the instructions provided in the accompanying prospectus for the annuity or life insurance program. Shares of the Portfolio may be redeemed on any business day. The redemption price of shares will be at the next-determined net asset value per share. Redemption proceeds will be wired to the administrator generally on the day following receipt of the redemption request, but no later than seven calendar days. Contract owners will receive their redemption checks from the administrator.

The Portfolio may suspend the redemption right or postpone payment at times when the New York Stock Exchange is closed or during any emergency circumstances, as determined by the Securities and Exchange Commission.

The exchange privilege (your ability to redeem shares from one Portfolio to purchase shares of another Portfolio) may be available to you through your contract. Although we make every effort to maintain the exchange privilege, Vanguard reserves the right to revise or terminate this privilege, limit the amount of an exchange, or reject any exchange, at any time, without notice.

If the board of trustees determines that it would be detrimental to the best interests of the Portfolio's remaining shareholders to make payment in cash, the Portfolio may pay redemption proceeds, in whole or in part, by an in-kind distribution of readily marketable securities.

For certain categories of investors, the Portfolio has authorized one or more brokers to accept on its behalf purchase and redemption orders. The brokers are authorized to designate other intermediaries to accept purchase and redemption orders on the Portfolio's behalf. The Portfolio will be deemed to have received a purchase or redemption order when an authorized broker, or a broker's authorized designee, accepts the order in accordance with the Portfolio's instructions. In most cases, for these categories of investors, a contract owner's properly transmitted order will be

priced at the Portfolio's next determined NAV after the order is accepted by the authorized broker or the broker's designee. The contract owner should review the authorized broker's policies relating to trading in the Vanguard funds.

We generally post on our website at *vanguard.com*, in the **Holdings** section of the Profile page, a detailed list of the securities held by the Portfolio (under **Portfolio Holdings**) as of the end of the most recent calendar quarter. This list is generally updated within 30 days after the end of each calendar quarter. Vanguard may exclude any portion of these portfolio holdings from publication when deemed in the best interest of the Portfolio. Please consult the Vanguard Variable Insurance Fund's *Statement of Additional Information* or our website for a description of the policies and procedures that govern disclosure of the portfolio holdings.

Glossary of Investment Terms

Average Maturity. The average length of time until bonds held by a portfolio reach maturity and are repaid. In general, the longer the average maturity, the more a portfolio's share price fluctuates in response to changes in market interest rates. In calculating average maturity, a portfolio uses a bond's maturity or, if applicable, an earlier date on which the advisor believes it is likely that a maturity-shortening device (such as a call, put, refunding, prepayment or redemption provision, or an adjustable coupon) will cause the bond to be repaid.

Barclays Capital U.S. Corporate High-Yield Bond Index. An index that includes mainly corporate bonds with credit ratings at or below Ba1 (Moody's) or BB+ (Standard & Poor's); these issues are considered below investment grade.

Bond. A debt security (IOU) issued by a corporation, government, or government agency in exchange for the money you lend it. In most instances, the issuer agrees to pay back the loan by a specific date and generally to make regular interest payments until that date.

Capital Gains Distribution. Payment to portfolio shareholders of gains realized on securities that a portfolio has sold at a profit, minus any realized losses.

Cash Investments. Cash deposits, short-term bank deposits, and money market instruments that include U.S. Treasury bills and notes, bank certificates of deposit (CDs), repurchase agreements, commercial paper, and banker's acceptances.

Corporate Bond. An IOU issued by a business that wants to borrow money. As with other types of bonds, the issuer promises to repay the borrowed money on a specific date and generally to make interest payments in the meantime.

Coupon. The interest rate paid by the issuer of a debt security until its maturity. It is expressed as an annual percentage of the face value of the security.

Dividend Distribution. Payment to portfolio shareholders of income from interest or dividends generated by a portfolio's investments.

Expense Ratio. A portfolio's total annual operating expenses expressed as a percentage of the portfolio's average net assets. The expense ratio includes management and administrative expenses, but does not include the transaction costs of buying and selling portfolio securities.

Face Value. The amount to be paid at a bond's maturity; also known as the par value or principal.

Fixed Income Security. An investment, such as a bond, representing a debt that must be repaid by a specified date, and on which the borrower must pay a fixed, variable, or floating rate of interest.

Inception Date. The date on which the assets of a portfolio are first invested in accordance with the portfolio's investment objective. For portfolios with a subscription period, the inception date is the day after that period ends. Investment performance is generally measured from the inception date.

Investment-Grade Bond. A debt security whose credit quality is considered by independent bond-rating agencies, or through independent analysis conducted by a fund's advisor, to be sufficient to ensure timely payment of principal and interest under current economic circumstances. Debt securities rated in one of the four highest rating categories are considered "investment grade." Other debt securities may be considered by an advisor to be investment grade.

Liquidity. The degree of a security's marketability (that is, how quickly the security can be sold at a fair price and converted to cash).

Mutual Fund. An investment company that pools the money of many people and invests it in a variety of securities in an effort to achieve a specific objective over time.

Non-Investment-Grade Bond. A debt security whose credit quality is considered by independent bond-rating agencies, or through independent analysis conducted by a fund advisor, to be uncertain. These high-risk corporate bonds have a credit-quality rating equivalent to or below Moody's Ba or Standard & Poor's BB and are commonly referred to as "junk bonds."

Principal. The face value of a debt instrument or the amount of money put into an investment.

Securities. Stocks, bonds, money market instruments, and other investments.

Total Return. A percentage change, over a specified time period, in a portfolio's net asset value, assuming the reinvestment of all distributions of dividends and capital gains.

Volatility. The fluctuations in value of a mutual fund or other security. The greater a portfolio's volatility, the wider the fluctuations in its returns.

Yield. Income (interest or dividends) earned by an investment, expressed as a percentage of the investment's price.
